What are the Customer Points (CP) available?

80 CP for each unit.

How much volume (PV and GV) is assigned?

40 PV/GV Associate

30 PV/GV Customer

What's in Serene?

Serene uses the Brizo Pure whole flower fluid as its base, so you get the same whole flower fluid in Serene that you get in Süthe. The other ingredients in Serene help it move through the metered spray atomizer or are for taste.

What does CBD mean?

CBD stands for Cannabidiol. CBD is an herbal compound found in the hemp plant known as a cannabinoid. Serene also includes many other cannabinoids and terpenes that all work together for your benefit.

How does CBD work?

Our bodies naturally use CBD on special receptors throughout the nervous system, called the endocannabinoid system.

By preserving the full array of beneficial compounds found in hemp cannabis, Serene delivers what we call whole flower fluid -- the only complete, water-compatible CBD option available.

Serene, fully activates your body's endocannabinoid system with over a dozen natural compounds that it needs to operate at its best.

Will Serene get me high?

No. Serene contains less than 0.3% THC.

How many sprays are in one bottle? What is the dosage?

Each bottle contains approximately 240 metered sprays.

Each dose is 4 sprays inside the mouth.

How many doses are in one bottle?

Each bottle contains approximately 60 doses, which will last 30 days if using 8 sprays per day.

The bottle contains 13.3 mL of fluid.

Serene FAQ Continued

How much whole flower fluid is in each dose?

There are 1200 mg of whole flower hemp CBD fluid in each bottle.

Each dose (4 sprays) = 20 mg of whole flower fluid. Please consult the certificate of analysis of your particular product for a precise measurement of available cannabinoids.

Why do the CBD and terpene profile change with each batch?

Variation in the CBD profile is a natural occurrence. Each plant and each generation of plant strain is slightly different.

Where do you source your cannabis?

Brizo Pure sources cannabis organically grown from farms in California, Colorado, and Oregon.

What does "energized" mean?

"Energized" means the Serene formula was electromagnetically energized before bottling using a proprietary process.

How long does it stay, energized?

Our energizing process is stable, and customers will feel the difference it makes throughout the life of the product (a 2-year shelf life).

What is the benefit of an "energized" CBD?

The low frequency of our energized solution helps open "biological windows" in the cell, aiding in the reception of compounds and molecules into the cell.

You'll feel a similar "refreshed" feeling after using Serene as you would visiting somewhere in nature, like the woods. This is because nature is filled with ions that influence your body.

In short, our whole flower fluid is water-compatible, helping the beneficial compounds get into your bloodstream. Energizing the fluid takes it one step further, helping it become more available for cell reception – this is absorption on the cellular level.

What is "Whole Flower Fluid"?

Whole flower fluid means the full chemical profile of the plant is extracted and available in a water-compatible fluid (not oil). This makes our fluid far more absorbable, and concentrated, than anything out there.

What is your extraction method?

We use a proprietary extraction method that is unlike anything else. The most similar idea to our proprietary process is a cold-press extraction.

How is your CBD "water-compatible"?

Our proprietary extraction process makes the whole flower fluid water-compatible from the moment it leaves the flower.

How is Serene flavored?

Serene is flavored with organic mint, organic cinnamon, and natural stevia extracts.

Are the ingredients organic?

Everything in Serene is organic or naturally derived.

Serene FAQ Continued

What materials are used to make the cannister?

The Serene canister is made of aluminum with a food-safe barrier on the inside.

Can Serene spoil?

Serene is pressurized with nitrogen to keep all of the ingredients fresh.

Serene is shelf-stable for two years under normal conditions. Prolonged and excessive heat or cold may change the viscosity of the fluid or damage the natural ingredients.

Does Serene work better than Süthe?

Serene has the same whole flower fluid as Süthe, and you may see similar results.

Why would I use Serene over Süthe?

Feel Secure - Serene is in a small and discreet container that easily fits in your pocket or purse to go with you wherever and whenever you need it.

Feel Better – Serene’s water-compatible CBD spray disperses the whole flower fluid across a larger area for greater absorption – helping you feel better, faster.

Feel Whole – Energized whole flower CBD particles in Serene help you feel energized and refreshed like taking a walk through nature.

Can I use Serene topically?

Serene’s water-compatible and energized formula does have some topical benefits. However, Serene works best when sprayed inside the mouth.

Can children take Serene?

Please consult with your physician before giving Serene to children.

Does Serene work for everyone?

Serene has a potent and powerful combination of natural beneficial compounds.

However, some people may have a slight allergy to cannabis which may influence Serene’s effectiveness.

Additionally, CBD is not a cure-all. Ask your doctor if starting a CBD regimen is right for you.

I use 10,000 mg of another CBD oil, how much of your product should I use?

Start low; go slow.

Brizo Pure whole flower fluid is far more absorbable than a CBD oil. This means that you can ingest a far smaller amount to get the same result.

Where do I find information to share Serene with others?

Find downloadable PDFs and links to videos in the Tranont back office under “Sales Tools.”
